

FORWARDING EMAILS FROM SHIP TO ANY EMAIL CLIENT

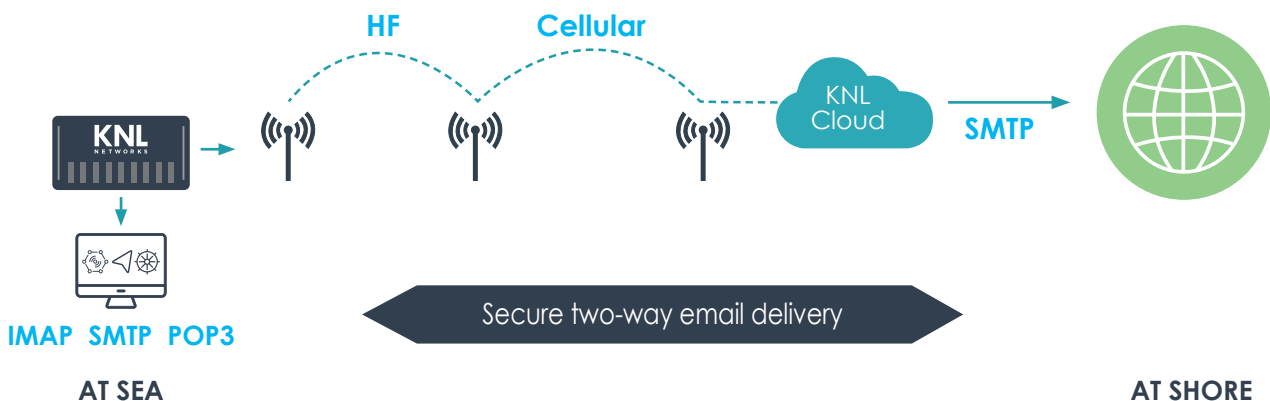

MAIL is the secure solution for global email communication. We provide an encrypted, compressed, and optimized on-board email service for smooth communication.

FEATURES AND FUNCTIONS

- Emails are automatically sent over HF or Cellular network depending on network access.
- Any type of user or domain is supported.
- Receive email notifications describing the status on both successful and failed sending.

HOW IT WORKS

MAIL offers a global email delivery from ship to Internet and back using cellular networks around the world. Selection of the optimal cellular network or the costs of using the network is all covered by KNL Networks.

TECHNICAL FEATURES

FEATURE	
PROTOCOLS	SMTP, IMAP, and POP3
ENCRYPTION	AES 256 between ships and MAIL back-end is used. MAIL can ultimately reach end-to-end email security dependent on email clients.
EMAIL SIZE	Max email size is 2 MB with attachments. Emails larger than 300 kB are sent over cellular connection when available.
EMAIL ADDRESS	By default, KNL Networks provides <i>desired_name@knlmail.com</i> email address. Other email domains can be configured to work with MAIL.
SMART FORWARD	MAIL can be integrated to other email services for backup. MAIL forwards emails to different email addresses in case of delivery issues.
