

REAL-TIME LOCATION, HEADING AND SPEED TRACKING WITHOUT BOUNDARIES

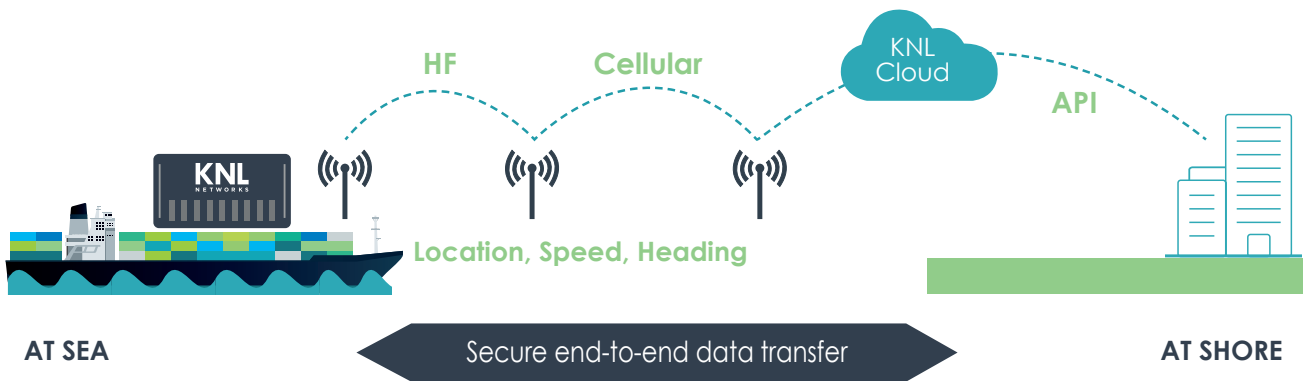

TRACK provides an easy and secure solution to trace the current position of any vessels globally, also where AIS and other services are unavailable.

FEATURES AND FUNCTIONS

- Query track history or monitor your vessel position in real time
- Get raw data into your system or visit KNL's User Portal to see the data visualized on a map
- Secure and simple API for data retrieval
- Wide selection of multiple standards for data representation

HOW IT WORKS

TRACK provides access to monitoring your vessel location, heading and speed of your vessels through a simple API. A single query to KNL Cloud allows getting the position history from previous 24 hours at once or receive new information about vessel movements in a minute magnitude from all your vessels. KNL Networks also provides a web-based user portal that visualizes positions on a map.

TECHNICAL FEATURES

FEATURE	
DATA ENCRYPTION	AES 256
API SECURITY	256-bit long unique key to access TRACK
DATA REPRESENTATION STANDARDS	JSON, GeoJSON and CSV
